

GOLIA

DINING TABLE

Characterized by sculptural, almost monumental forms, this dining table features an unusual combination of materials: rough, solid concrete combined with the luminosity of resin.

The base is made of concrete and resin. Its surface has a special effect obtained by corrosion with sea salt, which brings the material to life. The resin, with its brightness and depth, reflects the outside world, changing according to the lights around it.

TECHNICAL INFORMATION

COMPOSITION:

Top in cast resin and concrete.
Base in concrete and resin.
Brass joint details.

The product can be modularized,
for example, as in the images
shown.
