

SHEER LINEN IN LATTICE

Code: 11143

Application: Curtains

Composition: 100% Linen

Defined by its distinctive lattice structure, Lattice is an open weave that balances delicacy with substance. Woven on a specially adapted loom and combining fine and heavier yarns in both warp and weft, the fabric forms a subtle grid that gives the surface its airy yet textured character.

The construction creates a fabric that is simultaneously transparent and dimensional: light passes freely through the open weave, while the thicker yarns provide quiet rhythm and gentle visual structure. Washed for softness, the linen takes on a relaxed, tactile quality, falling with natural fluidity while retaining a composed structure.

At 300 cm wide and 240 g per square metre, Lattice is heavier than a traditional sheer, offering added presence. Its open structure enhances the diffusion of light, creating a gauzy transparency enriched by subtle texture and depth, making it particularly suited to generous curtains.
